Hi All, I know Luke will share this with Romane to prep for the Inchcape demo.

I'm looping us all in, so we can be aligned on product roadmap directions e.g. Figma, PBX configuration, and more. Looking at this list below, what should we emphasize in our demo?

They seem keen on PBX creating a design that can then go back into Figma. Why?

In the context of PBX... Why would they ask about APIs?

They seem very concerned about performance. Ideally, we can show off our performance. Ideas?

@Luke Davis I think we should answer as many as these as we can (briefly) before the demo, so we can spend more time on other topics.

Hi Luke,

Wanted to jot down some additional questions we have in preparation.

Derek

- What ability do we have to convert winning vibe coded tests to code that can be easily repurposed by developers to speed up the pace of productionisation?

PBX already produces CSS and JS for each variant, so developers can reuse that code today if they want to take a winning test into production. On top of that, we are building MCP Server capabilities, planned for the end of Q1 26, that will let developers access all PBX assets in a clean way, including the variant preview URL and the generated CSS and JS. That will make it much easier to repurpose winning tests and speed up productionisation, because the code from PBX is exposed as a clear asset instead of something they have to dig out of an experiment.

- Whilst I understand Kameleoon can ingest Figma files, do we have the ability to create Figma files from vibe coded tests?

Today, PBX works with Figma in one direction: we can ingest Figma files and turn them into variants for testing. If a team wants to go from PBX back into Figma, they can use existing HTML-to-Figma plugins on the HTML and CSS that PBX generates and get a Figma file from that. In parallel, we are building MCP Server capabilities (end of Q1 26) so developers can work straight with the PBX assets that matter most for delivery: the preview URL plus the CSS and JS. We see that code-level access as more useful for development teams than a direct "export to Figma" feature, while still allowing Figma files to be created when needed through those HTML-to-Figma plugins.

- What is the capability of Kameleoon and PBX with regard to more complex tests that involve things such as lead API integrations?

PBX is designed for front-end prototyping and variant creation, and the code it generates can call external APIs when needed, including lead APIs and other back-end services. We are also working on a new "master prompt" capability that will let you bring your own in-house logic into PBX, including how your APIs behave, so PBX can take that context into account when it generates variant code for these more complex tests. If you're interested in building our master prompt tech, It may be possible to invite you to our Customer Advisory Board (CAB).

Adam

- Ability to create digital experiences within iFrames?

Yes, as long as Kameleoon is also implemented within the iframe context.

- How long does the free trial last so we can confidently evaluate the two platforms?

Trials last anywhere from a few days to a few weeks. We'll align on what you want to validate and build a custom trial.

- What would any of those digital experiences 'cost' us in terms of credits?

On an enterprise license, you'll start with X,XXX credits. Only our Starter plan has limited credits, requiring customers to buy credit packs. For reference, the average experiment uses 2 to 3 "prompts" or "credits," depending on complexity. If we double your experiments from 45 to 90, that would be 270 credits, leaving you with XXX more.

- Will our current front-end development team be able develop digital experiences using the same development language(s)?

Yes. Your front-end development team can continue using the same languages they already work with. PBX lets your team quickly prototype ideas, and the generated JavaScript and CSS are fully accessible if you want to adjust or extend them.

If you prefer to build these experiences using feature flags, Kameleoon also offers feature management capabilities with SDKs available in JavaScript, TypeScript, and React, allowing you to wrap your code behind flags and variables as needed.

- Which SDKs does Kameleoon support?

Client-side (web and mobile) and server-side SDKs are available. You can find the complete list here: <https://developers.kameleoon.com/feature-management-and-experimentation/overview#supported-platforms>

- How many users permitted per subscription?

Unlimited users and teams. Once you have the license, you also have unlimited tests.

- Regarding privacy laws within Australia – is Kameleoon compliant with GDPR/data residency requirements?

Kameleoon is fully GDPR compliant and operates data centers in both Europe and North America.

- Does the Kameleoon script experience bloating (file size) over years of accumulative experimentation?

Only the minimal code required for currently active experiments is delivered at runtime. Historical or inactive experiments never affect the size of the script. For experiments that do not need to load immediately, we also offer options to delay execution for experiments that appear below the fold or after a certain amount of time on the site, such as pop-ups.

John

- Ability to selectively enable script injection only on pages that are actively running experiments (and refrain from running it on key pages or productionise it quickly), while still preserving audience segmentation and tracking, which are critical for the accuracy of A/B test results.
- Script size optimisation for SEO – loading monolithic file vs test-specific scripts only.

Our script is one of the smallest among major experimentation vendors at only 29 kb. After it loads on the first page, it is served from the browser cache on subsequent pages, which removes all performance impact. We do also offer the option to split the script into multiple pieces so that only test-specific code is loaded on certain pages. However, we generally do not recommend this approach, as the performance gains are minimal while the risk of flicker increases due to multiple files loading instead of one optimized bundle. Since only the minimal code required for active experiments is executed, and because the core script is both lightweight and cached after first load, the solution remains highly efficient while still preserving accurate segmentation and tracking.

Regards,

Derek Hambrett

Hi Luke,

Just a couple to get the ball rolling:

- Utilising browser local storage/cookies to mimic 1st party data for returning visitor personalisation
 - For example user has performed x, when they return they will see a personalised digital experience. Users that have not performed x, upon returning will not
- Making calls to APIs on production environment (e.g. Post code API, Pricing API)
- Creating digital experiences on the Subaru AU configurator www.subaru.com.au/configure
 - Up front pop-up modal
 - Tool tip
 - Re-arranging CTA buttons

Kind regards,

Adam

Hey Derek,

Thanks for the flexibility.

Are there any use cases that you would like to see during the demo?

If not, we can just show you some typical use cases we do for customers with similar business models.

Looking forward to connecting tomorrow,

Luke

Hey Derek,

Nice to meet you. Love to see your enthusiasm to see a demo. What time do you all take your first meeting at AEDT?

Does Wednesday at 9am work for an hour demo?

All the best,

Luke

On Dec 5, 2025, at 5:28 p.m., Derek Hambrett IAL <derek.Hambrett@inchcape.com.au> wrote:

Hi Collin,

Thanks for outlining the plan. A demo sounds great, and we'd like to lock this in before Christmas if possible. Could you please share a few time slots AEDT next week that work for you?

Our goal is to use the demo to ask any questions and then look to set up the POC in the New Year.

Thanks again for your support and for sharing the product tour link.

Regards,
Derek

This Message Is From an External Sender

Hi Derek,
This message came from outside your organization.

I recommend this plan: We sit together for a demo before you take Kameleoon out for a test drive (POC).

The demo would show you how Kameleoon would handle Inchcape's current (and preferred) way to build, launch, and analyze a test.

You'd meet some of the Customer Success Team, who would be assigned to support you.

After the demo, we'd align on what you wanted to do during the POC. I'd give you the keys. We'd organize a cadence to check in and review how the POC is going.

You'd be able to compare Kameleoon to Optimizely, and make a decision on the best path forward for Inchcape's testing needs.

If that works, I'll have my team set up the demo (and then POC) with you.

In the meantime, here's a product tour of Kameleoon for you, Adam, and John. You may see capabilities here that you'd like us to dive into during the demo.

<https://kameleoon.navattic.com/platform-tour>

Sound like a plan? If so, please let me know when you'd be free. Your mornings would be best. (Or, I can give you some options to choose.) I recommend 1 hr so we can cover everything.

Thank you for letting us have a chance to learn more about your work!

On Thu, Dec 4, 2025 at 8:58 PM Derek Hambrett IAL <Derek.Hambrett@inchcape.com.au> wrote:

Hi Collin,

Yes, a demo sounds good thanks.

How do we go about running a demo? Would this only be a meeting or are you suggesting handing us over the tool to have some time with it?

If the former I'll bring @Adam Dominik IAL along as well as our Tech Lead @John Choi IAL who will ensure Kameleoon's capability aligns with the sophistication of our tests and the architecture of our sites.

Regards,

Derek Hambrett

CAUTION: This email originated from outside of the organisation. Do not click links or open attachments unless you recognise the sender and know the content is safe.

Hi Derek,

Thank you for the info.

Looks like 10 sites with roughly 715k monthly unique users (MUUs).

Without knowing exactly what specific/extra capabilities you need e.g. mobile app, etc. the list price for a Kameleoon Experimentation license for 715k MUUs is USD 45k/year.

Kameleoon doesn't charge for the number of tests.

What I'd like to do is work with you all to turn those 45 tests into 90.

To double the number of tests means relying on engineering only when needed.

I shared with you some fairly basic examples of Kameleoon PBX building variants.

Would your side want to run a demo (or POC) with Kameleoon so you can see how we handle basic to *advanced* experiment needs?

We'd verify what features you need and build out a plan to support the 10 sites and MUUs. You could meet more of the Kameleoon team, who would be supporting yours.

Does a demo or POC make sense? What would be the most helpful way I could support you all moving forward? Happy to be creative and help out however I can.

Thank you.

On Sun, Nov 30, 2025 at 8:00 PM Derek Hambrett IAL <derek.Hambrett@inchcape.com.au> wrote:

Hi Collin,

Thanks for your time last week and for following up with the below.

Please see monthly average traffic per brand.

Brand	Avg monthly traffic volume YTD
Subaru AU	382k
Subaru NZ	32k
Foton AU	41k
Deepal AU	110k
Peugeot AU	40k
LDV NZ	12k
KGM NZ	10k
Toyota SG	66k
ORA HK (EN & TC)	7k
Lexus HK (EN & TC)	14k

Not sure if it makes a difference but we do tend to test on more brands than others. Here’s our annual forecast for next year –

2026

- 12 Subaru AU
- 6 Peugeot
- 6 Deepal/Foton

9 LDV/KGM/Subaru NZ
12 Ora/Toyota SG

TOTAL – 45

Please let us know what sort of costs we'd be looking at based on the above.

Regards,

Derek Hambrett

CAUTION: This email originated from outside of the organisation. Do not click links or open attachments unless you recognise the sender and know the content is safe.

Hi Andrew and Derek (and Adam!),

Good to reconnect with you about your CRO and experimentation work.

@Andrew - Inchcape Allan I hope all is well in your world. I'm sharing the deck I presented to Derek and Adam. It includes the examples of Kameleoon PBX building variants on [Subaru.com.au](https://www.subaru.com.au) with prompts.

(PDF is attached, but so you can see the examples, I'm also sharing a link.)

<https://docs.google.com/presentation/d/1sOXYjwv1WfxvAc2CS4J7Hv0e5z9jSWHrPcVpB4EsGDs/edit?usp=sharing>

Chatting with AI to ideate, build variants, do targeting, set goals, and analyze results is where experimentation (SaaS, in general) is headed. It makes experimentation easier and *less dependent on developers*.

I suggest we organize a POC so you can see how Kameleoon covers all the work you're currently doing with Optimizely AND so you can see PBX in action. Compare apples to apples. We could learn what you want from Figma and how you're currently ideating test ideas. [Kameleoon's product road map](#) is already looking at these topics.

@Derek Hambrett IAL Please let me know the average number of monthly unique users (MUUs) to the sites you optimize with Optimizely. Rough is fine. Happy to help you see if there's a price differential on top of the extra capabilities.

Again, good to connect. Look forward to keeping the conversation going.
